

28 - Patrick Cummings Memorial Sports Complex

Table 28- Patrick Cummings Memorial Sports Complex

Site 28 Patrick Cummings Memorial Sports Complex

<i>General Description</i>	This is a large park which runs from Sodom Rd to Willoughby Drive, south of Weinbrenner Rd. in Chippawa. As the name implies, it is a major sports recreational complex including an arena and 6 baseball diamonds. In addition, there are a number of natural areas, containing deer and other wild life, which are described below.
<i>Polygon 1</i>	This is a wooded area in the eastern and south eastern portion of the park. It is very dense with a large amount of shrub species, particularly dogwoods and buckthorn. A hydro right-of-way cuts diagonally through the area from north to south.
<i>Polygon 2</i>	This is a riparian zone in the north east corner of the site. It runs along part of the stream bed that runs from the area south of the baseball diamonds, around the parking lot east of the baseball diamonds, then diagonally to the north-east corner of the park. At the time of the survey, it was a healthy wetland with a large number of frogs, and a good variety of native species. Invasive species such as phragmites and purple loosestrife were largely restricted to the area near the parking lot.
<i>Polygon 3</i>	This is the fringe area along the access road from Willoughby Dr. and around the parking lot. A larger number of invasive species were noted along this area.
<i>Polygon 4</i>	This area consists of uncut fields dominated primarily by herbaceous species with some shrub and tree species starting to grow.
<i>Polygon 5</i>	This is the wooded area north of the baseball diamonds and south of the homes along Weinbrenner Rd. Encroachments had been an issue a few years ago along the swale that marks the boundary between the private property and the park. For the most part, there were no serious issues observed here, except adjacent to one property where there was a trampoline, wooden chairs and a fire circle.
<i>Recommendations</i>	<ol style="list-style-type: none">1. Polygon 4 could be selectively reforested in order to unite the existing wooded areas.2. Invasive species such as buckthorn should be removed to encourage more beneficial tree and shrub species. Priority for removal shall be in areas where there is greater impact on the existing native vegetation. After removal of invasive species has occurred, monitoring is necessary to ensure that these plants do not re-establish themselves. The techniques used for the removals shall be tailored to the invasive species being removed and be in accordance with industry standards.

3. To raise awareness of the woodland features and functions, informative signage should be put on site. The signage should be installed near a main trail or access point to the woodland.
4. Polygon 5 should be monitored to eliminate encroachment and to maintain a solid buffer between the baseball fields and the houses by planting native species.
