- Dripline
- Property Boundary
- Tree Protection Fence

Tree Inventory
 All trees 10 cm in diameter and larger situated outside of PSWs on subject property, in the road allowance and on neighbouring property within 5 m were included in the tree inventory. Refer to Table 1 for the complete tree inventory information.

Tree Preservation Recommendations
 The following recommendations are made in attempts to reduce the impacts to trees identified for preservation:

- Tree protection fence must be installed at the dripline for trees identified for preservation prior to the commencement of pre-grading unless noted otherwise in this report and on Sheets 1 and 2.
- Once tree protection fence has been installed it must not be moved, relocated or altered in any way (unless repairing fallen fence etc.) for the duration of the construction period.
- No intrusion into an area identified on Sheet 1 as a tree preservation zone (TPZ) is allowed at anytime during construction.
- No storage of machinery, construction debris, materials, waste or any other items is allowed within a TPZ.
- Any tree branches and roots that conflict with proposed development must be pruned by a Certified Arborist in accordance with good arboricultural practice.
- Tree protection fencing should be inspected by a Certified Arborist prior to and during construction to ensure that the fencing remains intact and in good repair throughout the stages of development.
