GR (CAN) Investments LTD.
4342 Queen Street, Ste 203
Niagara Falls, ON
L2E 7J7
Attention: Mr. Feng Shi, P.Eng

Dear Mr. Feng Shi

RE: **Tree Savings Plan – Riverfront Development, City of Niagara Falls**

Colville Consulting Inc. was retained by GR(CAN) Investment Co. Ltd. to complete a Tree Saving Plan for lands included within the Riverfront Development, in the City of Niagara Falls (Figure 1). The preparation of a Tree Saving Plan (TSP) is required by the Niagara Region to satisfy Condition 72 of the Draft Plan of Subdivision for the Riverfront Development. Condition 72 states that a Tree Saving Plan is to be completed by a Certified Arborist or Registered Professional Forester and submitted to Niagara Region for review and approval in accordance with the Region of Niagara Tree and Forest Conservation By-law (Bylaw 30-2008, Section 1.36).

Proposed Development

The portion of the development assessed as part of this Tree Savings Plan includes seven residential blocks (Block 1, 2, 3, 4, 5, 6 & 12), as well as Block 13, which is intended for mixed use, and Open Space Blocks 7 and 9. Interior roads identified in the lands use plan are also included in this assessment. The development plan for the Subject Property is included in Appendix A.

Methods

This Tree Savings Plan has been completed in general compliance with Section 1.36 of the Niagara Region's former Tree and Forest Conservation By-law (Bylaw 30-2008), and was prepared with the goal of retaining and protecting as many trees as possible on the site.

This plan is intended to be read in conjunction with the various Environmental Impact Studies and subsequent addendums previously prepared for this development, which included detailed botanical inventories and Ecological Land Classification (ELC) descriptions of vegetation communities on the site. The extent of vegetation communities on the Subject Property are illustrated in Appendix B.

The work plan for this study included the following components:

- Field reconnaissance to collect tree inventory information for trees situated within the lands included in the proposed development;
- Preparation of summary mapping;
- Evaluation of potential tree saving opportunities based on the proposed land use plan preliminary site designs; and,
- Recommend appropriate mitigative measures to help preserve trees to be retained on the property.

Location of Subject Lands

Thundering Waters

Prepared for: GR (CAN) Investment Co. Ltd.

Prepared by: **COLVILLE** CONSULTING INC. 

DATE: August 2021

FILE: C15082

The tree inventory on this property was conducted over several days between April 25 and August 2, 2021, and included the following parameters:

Species – common and botanical names provided in the inventory table.

DBH – diameter at breast height (cm), measured at 1.4 m above the ground.

Dripline – recorded as crown diameter in meters.

Condition – condition of tree considering trunk integrity, crown structure and crown vigor. Condition ratings include Good (G), Fair (F), and Poor (P).

Location – UTM coordinates of the tagged tree.

The inventory of trees on this property was limited to trees 10 cm in DBH and larger, which were situated within and adjacent to the proposed development areas. All live trees greater than 10cm in diameter were inventoried and tagged with tree tag displaying an identification number. A summary of tree tally information is provided in Appendix C.

Please note that this inventory intentionally excluded the majority of Common Buckthorn and Hawthorn species, since individuals of these species are not generally considered to be trees or represent species normally considered for protection as part of a Tree Savings Plan. Please also note that this inventory includes numerous Green Ash and White Ash trees that appeared to be in relatively good condition, however Ash trees in decline or showing signs of infestation by Emerald Ash Borer were excluded as these trees are not expected to persist on site.

Existing Conditions

The vegetation communities for the Subject Property (Appendix B) were most recently described in the Environmental Impact Study Addendum (2019) prepared by Savanta Inc. Provided below is a brief description of each vegetation community found within the areas included in this TSP. Site Photos are available in Appendix D.

Block 1, 3, 5 & 6

These blocks which are located on the western and southern portions of the Subject Lands were described primarily as Mineral Cultural Thicket (CUT1 & CUM1/CUT1). The Dry-Moist Old Field Meadow portions of these blocks are dominated by invasive and exotic forbs and grasses, though also include some native species such as Hemp Dogbane, Strict Blue-eyed-grass and goldenrod. The Cultural Thicket portions of these blocks are dominated by Dotted Hawthorn, with occasional Gray Dogwood, and scattered trees including American Elm and Eastern Cottonwood. The herbaceous layer's density and coverage is abundant and consists of Smooth Aster, Old Field Aster, New England Aster, and Wild Strawberry in moist areas, and Gray-stemmed Goldenrod, Early Goldenrod, Oxeye Daisy, and Common St. John's-wort dominated the drier areas.

Block 2

Block 2 consists of mainly equal parts Mineral Cultural Thicket (CUT1) and Cultural Woodland (CUW1), with a small patch of Fresh-Moist Poplar Deciduous Forest (FOD8-1). The cultural thicket is similar to the description above and is interlaced within the CUW1 due to the open canopy and dense shrub/understory layer of Hawthorn, Gray Dogwood, Common Apple and Common Buckthorn. The canopy of the Cultural woodlands in this area are comprised of Green Ash and Eastern Cottonwood, with lower abundance of American Elm, White Willow and an occasional Pin Oak. Green Ash was dominant in the understory. Climbing Poison Ivy was abundant throughout. Herbaceous groundcover included Broad-leaved Enchanter's Nightshade,

Fowl Mannagrass, Field Horsetail, Woodland Sedge, Common Nipplewort and Kidney-leaved Buttercup.

The small Fresh-Moist Poplar Deciduous Forest (FOD8-1) community was dominated by young Eastern Cottonwood, along with scattered American Elm. The understory consists of Common Buckthorn, Gray Dogwood, and Highbush Cranberry. Abundant ground cover species included Wild Strawberry, Asters, Enchanter's Nightshade, and Thicket Creeper.

Block 4

Block 4 consists of roughly equal parts Mineral Cultural Thicket (CUT1) and Cultural Woodland (CUW1), both described above.

Block 12

Aside from the previously described Mineral Cultural Thicket (CUT1) and Cultural Woodland (CUW1), Block 12 also include areas of Dry-Moist Old Field Meadow (CUM1-1), a small patch of White Pine Coniferous Plantation (CUP3-2) and some disturbed lands (DIST). The Dry-Moist Field Meadow (CUM1-1) within Block 12 contains a low abundance of woody species and is dominated primarily by forbs and grasses. This includes invasives such as Red Clover, Bird Vetch, Phragmites and Meadow Fescue. Native species include Hemp Dogbane, Strict Blue-eyed-grass and Goldenrod. Tree and shrub coverage was sparse (less than 25% cover), and included Eastern Cottonwood, Common Buckthorn, Heart-leaved Willow, Gray Dogwood, and Dotted Hawthorn.

The small White Pine Coniferous Plantation (CUP3-2) located in the central portion of Block 12 was dominated by planted White Pine, with few other species aside from Green Ash. The understory and shrub layer consisted of Climbing Poison Ivy, Thicket Creeper, and Choke Cherry. The ground layer was abundant with Wild Red Raspberry, Wild Strawberry, Virginia Knotweed and Avens species.

Results

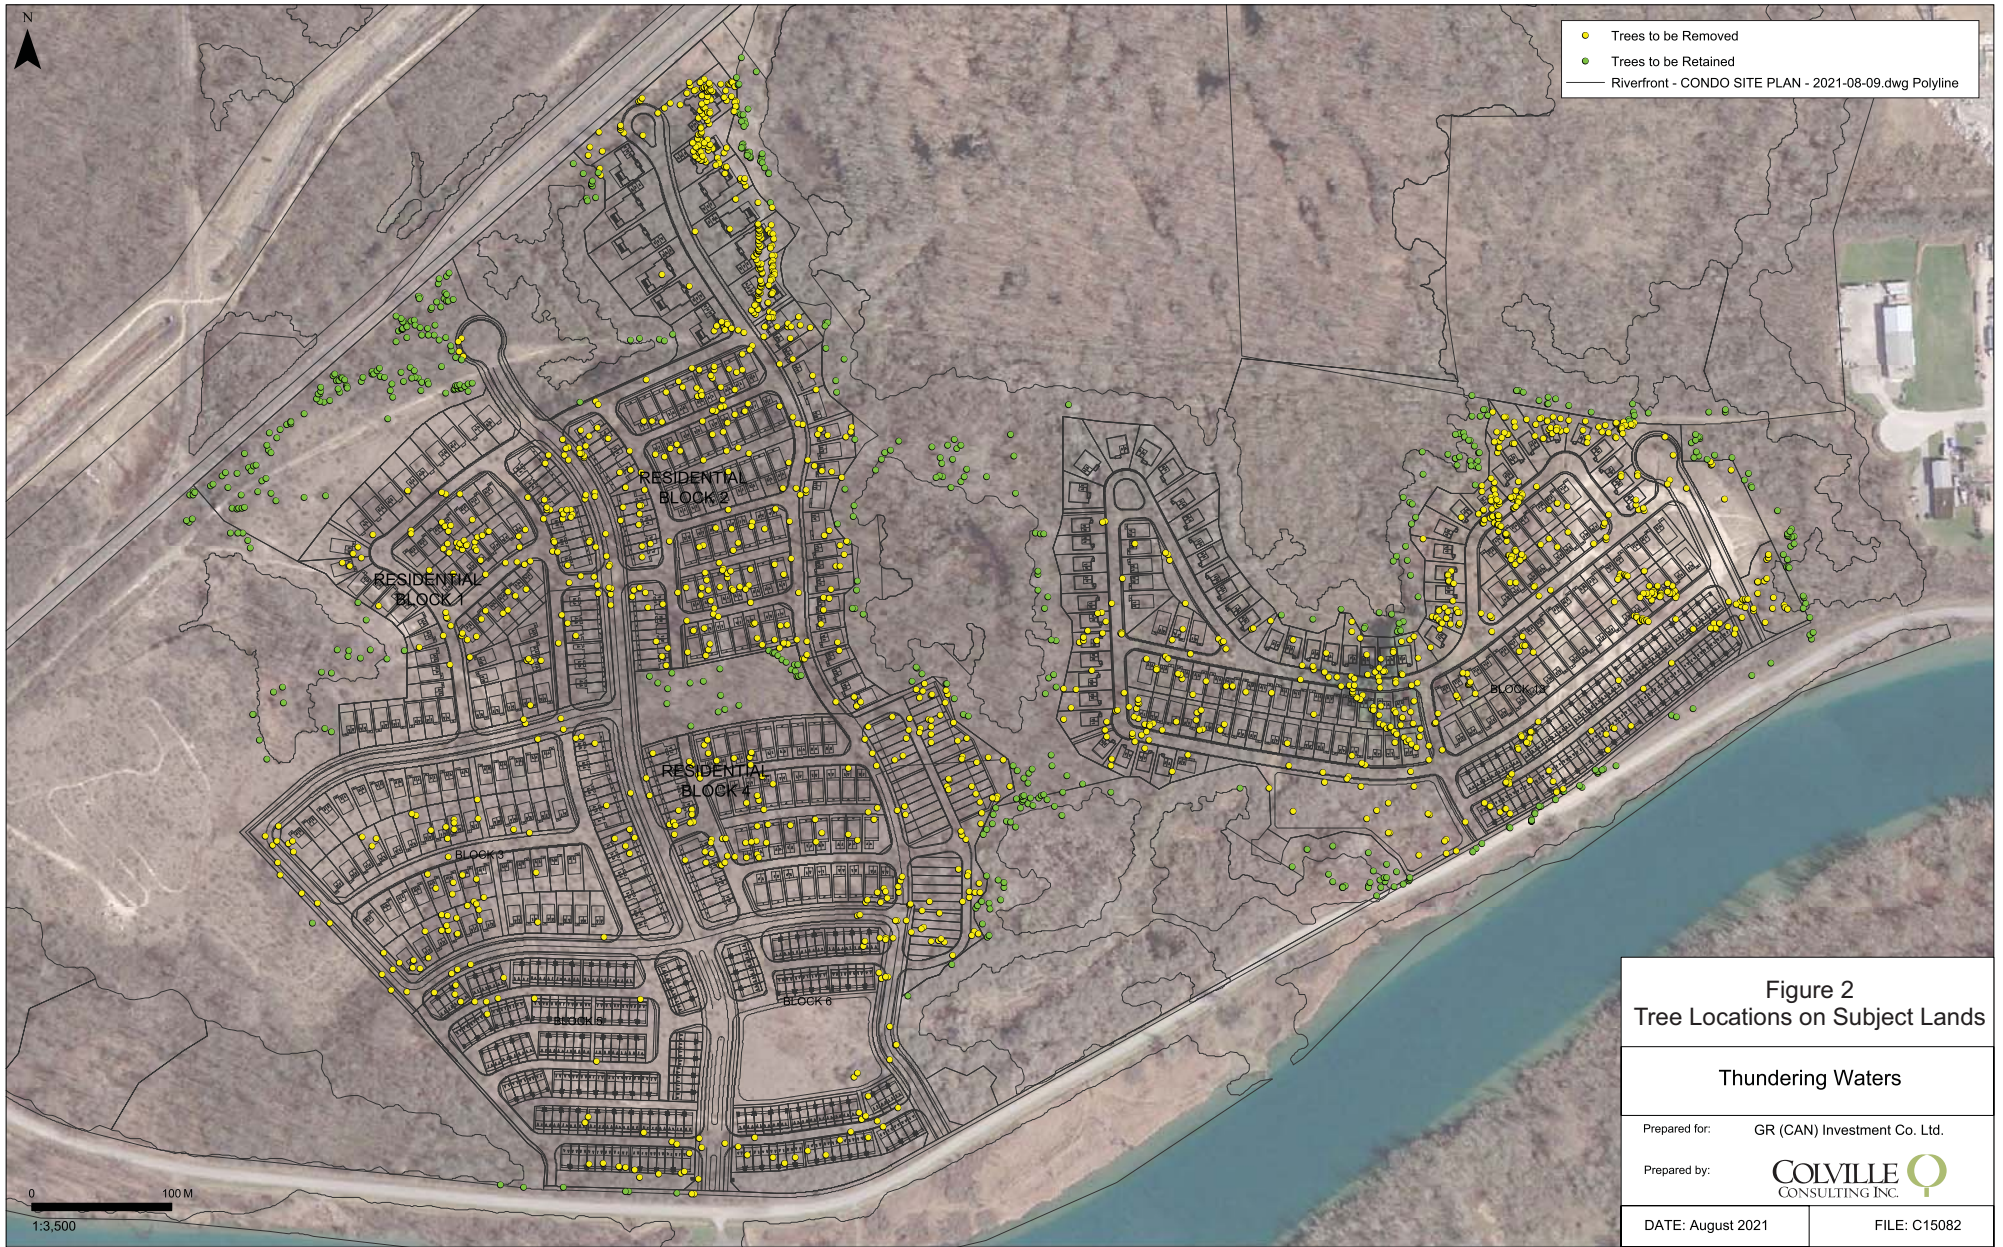

A total of 1932 trees were inventoried on and immediately adjacent to the Subject Lands (see Figure 2). Inventoried trees consisted predominantly of Eastern Cottonwood (27.5%), American Elm (22%), Green Ash (12.5%), Willow sp. (12%), large European Buckthorn (5.5%), Wild Pear (5.5%) with an additional 26 species comprising the remaining 15%. No botanical species at risk were observed during the tree inventory. A list of inventoried trees are located in Appendix C and locations of trees are illustrated in Figures included in Appendix E.

Due to the historical alterations that occurred on these lands, trees in the inventory area are generally young to mid-aged. The average tree diameter was determined to be 27.7cm, with some larger diameter Cottonwood and Willows also occurring.

With respect to the general health of the trees, no obvious signs of wide-spread disease were evident. Several dead American Elm were present and were likely compromised by Dutch Elm Disease, however some larger diameter Elms in relatively good condition were also present. Typical of woodlands in Niagara, most Ash trees larger than 20cm in diameter have died as a result of Emerald Ash Borer. Some Ash trees in fair condition were noted, however these trees are not expected to persist on the site long-term.

Summary and Recommendations

From our assessment it is anticipated that approximately 1378 inventoried trees greater than 10cm in diameter will need to be removed to facilitate the proposed development, and it is also

likely that 554 inventoried trees located immediately adjacent the development area can be retained (See Appendix C). Since detailed grading and development plans have yet to be finalized, these estimates are considered preliminary. It is recommended that further assessment of opportunities for additional tree retention be completed following the detailed site design.

Mitigation Measures

To assist in maintaining the health of trees to remain on and adjacent the Subject Property, it is recommended that the following mitigation measures be implemented.

- A limit of work fence should be erected on the property where anticipated works are to occur in close proximity to trees. Where possible, it is recommended that a Tree Protection Zone be established no less than 2.4m from any trees between 10-40cm DBH, 3m from any trees 40-50cm DBH, 3.6m from any trees 50-60cm DBH and 4.2 m from any tree larger than 60cm DBH.
- Equipment use in close proximity to trees to be retained should be minimized where possible. No equipment use should occur within the Tree Protection Area;
- Construction materials, equipment, soil, construction waste or debris shall not to be stored within the Tree Protection Area or within the dripline of any trees identified for protection;
- Any tree roots encountered during excavation should be flush-cut to promote new root growth.
- Any required vegetation removal should be conducted in a manner to avoid impacts to nesting birds and wildlife that may be utilizing habitats on the property.
- It is recommended that tree and vegetation removal on the property be completed by a reputable tree clearing contractor to help avoid impacts to trees to remain on the site.
- All areas of disturbed soil should be seeded and vegetated following construction to help minimize soil erosion on the site.
- Any trees located adjacent the Subject Property to be retained should be clearly marked with high visibility marking paint and protected with a tree wrap to help prevent damage to the trunk during construction.
- It is recommended that native trees be incorporated into the proposed plan where possible to help replace trees to be removed.

Limitations of Assessment

It is our policy to attach the following clause regarding limitations. We do this to ensure that all interested parties are aware of what is technically and professionally realistic in retaining trees.

The assessment of trees presented in this report has been made using accepted arboricultural techniques. Specifically, we conducted a visual examination of all the above ground parts of the tree for: structural defects; scars; external indications of decay such as fungal fruiting bodies; evidence of attack by insects; discolored foliage; the condition of any visible root structures; and the degree and direction of lean (if any). We also noted the general condition of the trees and the surrounding site, and the proximity of property and people. Trees were not cored, probed or climbed and there was no detailed inspection of the root crowns involving excavations.

Notwithstanding the recommendations and conclusions made in this report, it must be recognized that trees are living organisms, and their health and vigour constantly change over time. They are not immune to changes in site conditions or seasonal variations in the weather conditions.

Although every effort has been made to ensure that this assessment is reasonably accurate, the trees and shrubs should be re-assessed periodically. The assessment presented in this report is valid at the time of inspection.

Please do not hesitate to contact the undersigned should you have any questions regarding the results of this report.
